PROJECTS

Online Portal for Student Support (An Academic Query Solving)

- This Transactional system features to the user of an educational institute to be part of different types of groups, share data and documents among different users, have discussion threads, and instant notifications.
- In the Discussion thread, a response of the user's input is generated automatically through Chatterbot. It uses a selection of machine learning algorithms to produce different types of responses.
- The application is python-based and should be compatible with other systems.

Android App for Women Safety

- An App that ensures the safety of women and brings assistance when needed.
- Functional Description:
 - 1. Add emergency contact numbers.
 - 2. View and change the emergency contact number after adding.
 - 3. Send Location in SMS with one tap.
